

Gecko Fact Sheet

There are over 1,500 species of gecko.

Geckos have amazing toes that help them stick to any surface – except Teflon!!

Geckos produce a lot of sounds such as chirps and clicks to communicate with other geckos.

Most species of gecko can drop their tail if a predator attacks.

If a gecko has dropped its tail it can regrow back but will likely be shorter and coloured differently to the original. A crested gecko can't regrow its tail once it has gone.

Most geckos don't have eyelids and lick their eyes to clean them!
