

BRACHIOSAURUS

A TOWERING HERBIVORE OF THE LATE JURASSIC

SIZE:

About 18–22 metres
(59–72 feet) long

About 9–12 metres
(30–39 feet) tall

Human:
about 1.7 metres
(5 ft 7 in) tall

Brachiosaurus was much taller than a human, with its nose held high above the ground.

LATE JURASSIC

Brachiosaurus lived during the Late Jurassic Period, about 154–150 million years ago.

WHERE IT LIVED

Fossils have been found in western North America, mainly in what is now the United States.

PLANT EATER

Brachiosaurus was a herbivore. Its long neck allowed it to feed on vegetation at different heights.

DISTINCTIVE BUILD

Its front legs were longer than its back legs, giving its body a distinctive sloping shape.

AMAZING FACT

Its nostrils were positioned high on its skull, above the end of its snout.
